

04. Create Delete Update Your First Database

■ Create:

```
CREATE DATABASE my_first_database;
```

■ Delete :

```
DROP DATABASE my_first_database;  
DROP DATABASE my_first_database WITH (FORCE);
```

■ Show Database:

```
\l  
SELECT datname FROM pg_database;
```

■ Database with a specific **encoding**

```
CREATE DATABASE my_first_database  
WITH ENCODING = 'UTF8'  
TEMPLATE = template0;
```

- **UTF8 (UTF-8)** – Most widely used, supports all Unicode characters
 - **UTF16** – Unicode encoding using 2 or 4 bytes
 - **UTF32** – Fixed-length Unicode encoding (4 bytes per char)
-

■ What is ENCODING (PostgreSQL)?

- **ENCODING** means how text is stored
- Common: UTF8 (recommended)
- `template0` allows you to choose encoding freely
